

COVID-19

Today the necessity for disinfection and sterilization has been standard operating procedure in all healthcare and medical associated facilities for as long as we can remember. The difference today is that it has now become a fundamental requirement for all facilities where the potential for cross contamination exists, which is to say any location where human presence is required or has access.

The reason of course is the global pandemic of Novel Coronavirus, or Covid-19. This highly contagious virus has altered not only our lifestyles but also our expectation of what a safe environment really is. The trouble is control and eradication of the pathogen is no longer localized to high touch areas such as phones, keyboards, door handles and other shared apparatus and surfaces. The only effective approach today is the sterilization and decontamination of complete environments simultaneously.

Wipeout Specialty Cleaning Inc. is a rapidly growing leader in incident or emergency response including environmental sterilization and disinfection as evidenced by the trust level of some of the biggest corporations in Canada, see (www.wipeoutclean.ca). Utilizing state of the art equipment and professionally trained personnel **Wipeout Speciality Cleaning** is uniquely positioned to ensure a safe and virtually non-communicable workspace for both employees and customers. With Wipe Out's training and expertise your are always ensured of a successful outcome. Don't be fooled because no one can claim 100% elimination as long as the potential for re-introduction exists.

Whole space decontamination however remains the most effective way to manage a potentially volatile environment. In addition to focusing on high use shared environments and surfaces Wipeout uses a speciality, government approved anti-viral solution that is "fogged" or misted onto all surfaces. **Wipeouts'** products are accompanied by Health Canada approved Safety Data Sheets (SDS) and Drug Information Numbers (DIN) which are government registered as not only effective in the elimination of viral contaminants but are also safe, non-toxic and environmentally friendly. Additionally, with Wipeout products pre-cleaning or surface prep is suggested, but not required.

With an average dry time of 10 minutes (dependant on Surface type) Wipeouts' specific dedicted sanitization equipment allows almost immediate re-entry to the treated area, with the peace of mind that comes from knowing you have used the best provider, the most sophisticated equipment and the same solutions widely used within the food industry & medical profession.

Wipeout Specialty Cleaning Inc. has been a leader in building maintenance and cleaning / sanitation services , including bio-friendly products (**www.off the walls**) since 2006. It's not clean until it's Wipeout Clean.
